

Elacin Universal ST24 at work with cord

Elacin Universal ST24 is a one-size-fits-all hearing protector, safe and intended for working in noisy environments. Because of its unique design, this hearing protector offers comfortable protection for your ears against excessive ambient noise.

Elacin Universal ST24 significantly contributes to working safe.

The design is unique and innovative. It has two lamellae and a canal all the way through to accommodate the acoustic filter. It's curved shape is uniquely matched to the average ear, ensuring a comfortable fit for everyone.

The lamellae are very soft to optimize the seal with minimal pressure. The handgrip is shaped such that one intuitively holds and inserts the product correctly.

The Elacin Universal ST24 is always provided with a cord.

Material + Colour

The Elacin Universal ear plug is manufactured out of very soft cytotoxic-free thermo plastic elastomer (28 Shore A). The Elacin Universal ST24 is delivered in yellow.

Filters

The acoustic filter is based on the newly developed helix technology™:

- Average noise reduction of 24 dB
- Flat attenuation
- High speech intelligibility
- Ambient sounds remain audible

A huge benefit of this filter technology is the open connection to the outside air, preventing a vacuum between the product and the ear drum and allowing ventilation.

Application of use

- People working in noisy environments
- Temp workers

Suitable for use in

- Industrial environments
- Situations where speech intelligibility is essential
- Heavy noise
- Impact noise
- Environments where perception of warning signals is critical

“Everywhere where high quality audio is desired but custom-made hearing protection is no option for whatever reason.”

Benefits

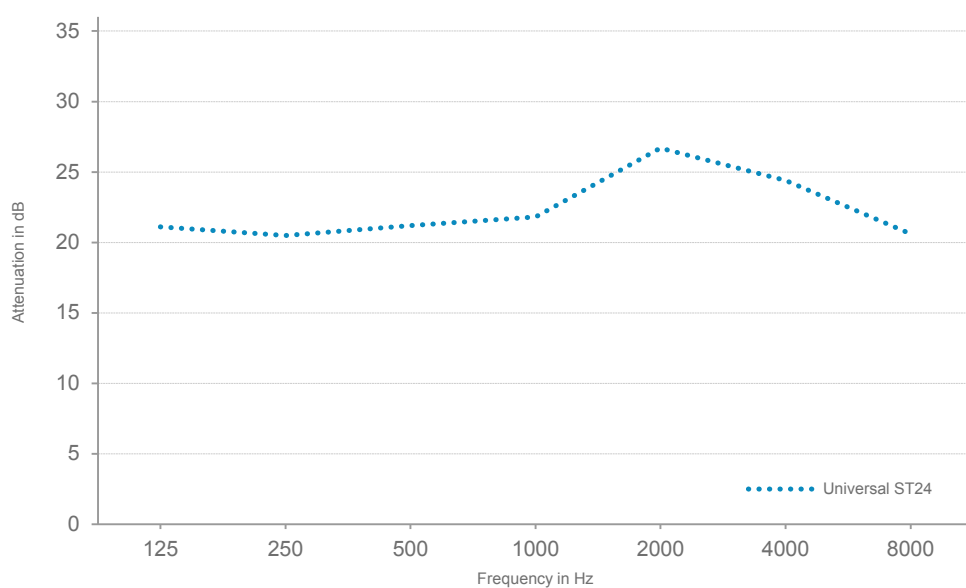

- Soft and light
- Easy to insert and remove
- Fits comfortably in the ear
- With cord
- Reusable
- Flat attenuation
- With cord
