

Instructions

Consult the Material Safety Data Sheet(s) on file that pertain to the liquids that spilled.

1. Call for assistance if necessary
2. Put on the gloves and goggles
3. Place socks around the area of the spill to prevent persons from tracking through the spilled material and to prevent the spreading of the spill
4. Put the grey pads from the kit around the spill and/or inside the contained area to start the absorption process.
5. Add pads as needed to absorb the spill. When the pads are fully saturated, they will appear dark and wet.
6. Sweep or scoop up the contaminated absorbent with the enclosed shuffle and place it into the disposal bags or wheelie bin directly
7. Remove the last remaining liquid from the floor by pouring loose absorbent from the large bag on the spill
8. Sweep up the loose absorbent with the enclosed broom and shuffle and put it in the waste bags or wheelie bin
9. If needed, the surface can be cleaned with the cleaning product in the small yellow bottle. This cleaning product can be diluted with water up to 1:50.
10. Make selfadhesive label(s), identifying the waste as Waste Oil containing XYZ Chemical, and attach to the container and/or waste bags
11. Dispose of the waste according to local regulations.
