“A co-worker dies, and 160 others have a work-related accident, every 15 seconds.”  
(International Labour Organization, 2015)

Workplaces claim more than 2.3 million deaths per year, including 350,000 fatal accidents and close to 2 million life ending work-related diseases.

In addition, 313 million accidents happen on the job every year, 268 million of those resulting in at least 3 days absence from work. ILO estimates the cost of work accidents & professional diseases indemnities and absences to 4% of the world GDP.

Workplace accidents not only impact companies (Figure 1) but also people's lives and the overall health of the available workforce. (Figure 2)

## What is Lockout/Tagout?

Lockout / Tagout is a planned safety procedure which involves turning off the energy supply of industrial machinery and equipment whilst maintenance work or repairs are being carried out. This procedure protects workers from the risks posed by live machinery or electricity.

## LO/TO SAVES LIVES!

## Why work with Brady?

**Brady is the global leader in Lockout/Tagout solutions.**

Brady was the first to respond to the new OSHA legislation in the U.S. in 1990, and has maintained its position as a leading Lockout solutions provider ever since. Today, Brady offers a comprehensive package for Lockout/Tagout compliance.

Increasing demand for advanced safety solutions in Europe and MEA countries has driven our R&D as well as know-how to become the best-in-class LO/TO complete solution provider.

## LOCKOUT / TAGOUT - GLOBAL BEST PRACTICE TRAINING MOVIE

This instructional programme is designed to inform and train organisational safety leaders, as well as employees who may be exposed to hazardous equipment energies. It will help employers to develop and improve their company's Lockout / Tagout programme. It is also extremely beneficial for all employees who shut down and service equipment, instructing them how to avoid accidents and remain safe on the job.

### Highly comprehensive content

The product's composition is as follows:

- The Movie
- A Quick Start Guide
- An Instructor's Guide
- An Employee Quiz

Preview the training movie on:

## Why implement a Lockout/Tagout programme?

### Reduced accident rates and injury costs

EU Figures show that 10 to 15% of all fatal accidents at work and 15 to 20% of all accidents are connected with maintenance. Common injuries include fractures, lacerations, amputations, burns and shocks. Due to the serious nature of many LO/TO accidents, injury-related costs can be exorbitant.

### Less downtime, higher productivity

A well-organised LO/TO programme that includes clearly labelled energy sources, easy-to-follow procedures, and readily accessible lockout tools can greatly speed up maintenance and servicing activities. Workers can avoid time-consuming tasks such as tracing pipelines and electrical circuits in order to verify the appropriate energy control points. As a result, maintenance work is completed more efficiently, downtime is reduced and machinery is kept running at peak performance levels.

### Reduced indirect costs

Accidents can have a significant impact on work scheduling and productivity at the affected job site. The unexpected start up of equipment can also cause extensive damage to the machinery itself, adding the expense of equipment repairs and replacement to the total cost involved.

### Best Safety Practice

Lockout / Tagout has become globally recognised as Best Safety Practice for many industries and is a legal requirement in the US.

## Brady's Complete LO/TO Solution

Complete attitude to effective energy control via audit, identification of energy points, selection and purchasing of proper devices, elaboration of instructions, training and implementation.

## Efficient Lockout Programme in 4 Steps

Follow the BEST GLOBAL PRACTICE Plan for Creating an Efficient Lockout Programme:

Audit, policy and procedures

Identification and marking of all energy control points

Proper lockout tools and warning devices

Training and Awareness of New Safety Standard

### 1 Create energy control (LO/TO) policy & procedures

The first step is to develop and document a lockout policy that identifies in detail the purpose and scope of the lockout programme.

We can help you to create a roadmap for the successful LO/TO programme implementation, where you need to execute an audit of all existing potential sources of hazardous energy, create a list, describe procedures and define responsibilities.

#### Why do you need lockout procedures

- Procedures serve as a check sheet to help employees avoid mistakes and reduce the risk of accidents and injuries.
- Procedures speed lockout activity, which in turn reduces downtime and improves operational productivity.
- Documented machine-specific energy control procedures are required by OSHA.

#### TIP: LO/TO Policy should include:

- ✓ Purpose and scope
- ✓ Authorised personnel
- ✓ Enforcement policy
- ✓ Training methods
- ✓ Address **special circumstances** such as group lockout, shift transfer etc.

### 2 Identify all energy control points

In this step you need to localise and clearly mark all energy control points, including valves, switches, breakers and plugs, with permanently placed labels or tags. Our label makers and Do-It-Yourself Signmarking printing systems together with durable label materials are designed to provide you with reliable and long-lasting identification.

| <b>Authorised Employee</b> | → A person who locks out or tags out machines or equipment in order to perform servicing or maintenance and identifies that equipment have a source(s) of energy that can cause injury to the employee. | → Requires the most in-depth training about LO/TO.                                 |
| <b>Affected Employee</b>   | → An employee whose job requires him/her to operate or use a machine or equipment on which servicing or maintenance is being performed under LO/TO, or whose job requires him/her to work in the area.  | → Needs to be informed about LO/TO and does not attempt to remove lockout devices. |
| <b>Other Employees</b>     | → Who may encounter lockout being implemented.                                                                                                                                                          | → Need to know the significance of lockout, and to keep away.                      |

## Respecting Legal Requirements

### EUROPE

The **EU Guidelines 89/655** specify the minimum requirements concerning safety and health while using equipment. Paragraph 2.14 lays down that “every piece of equipment must be fitted with clearly visible devices with which it can be separated from every energy source.

**EN 1037** norm related to the equipment’s safety defines the measures regarding the energy isolation of machinery and the power dissipation to prevent hazardous equipment re-energising. It assures a safe and secure intervention within a risk-prone area.

European directive **CEE 89/655** outlines the minimum regulations for the safety and protection of employees when servicing industrial equipment.

### AUSTRIA:

AschG – ArbeitnehmerInnenschutzgesetz – Federal Act on Occupational Health and Safety

AM-VO – Arbeitsmittelverordnung (Ordinance on Work Equipment and Tools) – Regulation of the Federal Ministry of Commerce and Labour on protection of employees while using work equipment paragraph 1, §17 (1)

### FRANCE:

**UTE C18-510** (electrical applications): Lockout of apparatus for service and maintenance to lockout equipment is to carry out the necessary procedures to ensure that the equipment is placed and maintained in a safe position; to prevent its activation and label that the isolated equipment must not be operated. The employer must ensure that all safety procedures are strictly implemented and regularly reviewed by appropriate means. Employees must use all necessary tools to carry out maintenance.

**Best practice document developed by INRS (Institut National de Recherche et de Sécurité) in November 2011: ED 6109**

- Décret 2010-1016 refers to the obligations of the employers for temporary or permanent electrical installations usage
- Labour code (article R4215-10) refers to the identification of the conductors
- Décret 2010-1018 refers to the prevention of electrical risks in work environment, décret 2010-2118 refers to the operations done on electrical installations.
- Labour code (article R 4544-5): the part of the installation on which work (de-energised) is done must be identified and locked.
- Arrêté of April 26, 2012: Every operation on electrical equipment must follow the new norm NF C 18-510. Article 1 says that this norm is now included into the French Code of Labour.

### GERMANY:

The German legislation specifies this requirement in the “Minimum requirements for use of work equipment” (Betriebssicherheitsverordnung (Ordinance on Industrial Safety and Health), Annex 1. Work equipment controls must be secured against unintentional or unauthorised actuation.

According to the “Minimum requirements for the improvement of the safety and health of workers using work equipment” (Betriebssicherheitsverordnung (Ordinance on Industrial Safety and Health), Annex 2, modification, maintenance or repair operations can only be carried out when the work equipment is shut down. The work equipment and all its moving parts must be protected against accidental start and movement.

### ITALY:

The Italian legislation (Direttiva 2001/45/CE del Parlamento europeo e del Consiglio del 27 giugno 2001 che modifica la direttiva 89/655/CEE) concerns the minimum safety and health requirements for the use of work equipment by workers at work.

## Respecting Legal Requirements

### SWITZERLAND:

- UVG – Federal Law on Accident Insurance  
VUV – Regulation on the Prevention of Accidents and Occupational Diseases  
title 1, chapter 2, paragraph 1, art. 3; title 1, chapter 3, paragraph 2, art. 30, 31  
paragraph 3, art. 37; paragraph 4, art. 43
- EKAS Guideline no. 6512 – Work Equipment

*These regulations clearly stipulate that during maintenance, adjusting or cleaning of the equipment, it has to be in non-operative state and appropriate devices have to be used to ensure that, for example, a machine is not accidentally switched on.*

### SPAIN:

The Spanish directive (REAL DECRETO 1215/1997, de 18 de julio por el que se establecen las disposiciones mínimas de seguridad y salud para la utilización por los trabajadores de los equipos de trabajo. BOE nº 188 07-08-1997) states the minimum safety and health for workers' use of work equipment.

### UK ONLY: BS7671:2008

In the UK the Provision of Work Equipment Regulations – Regulation 19 – Isolation from Sources of Energy states: “Every employer shall ensure, that where appropriate, work equipment is provided with suitable means to isolate it from all its sources of energy. Every employer shall take appropriate measures to ensure that reconnection of any energy source to work equipment does not expose any person using the equipment to any risk to his health or safety”.

### USA (OSHA - OCCUPATIONAL SAFETY & HEALTH ADMINISTRATION)

OSHA regulation The Control of Hazardous Energy (Lockout / Tagout) 1910.147 states that it “requires employers to establish a programme and utilise procedures for affixing appropriate lockout devices or tagout devices to energy isolating devices and to otherwise disable machines or equipment to prevent unexpected energisation, start up or release of stored energy in order to prevent injury to employees.”

**Implemented LOCKOUT/TAGOUT is the law in some EU countries and considered to be best practice in all European countries!**

## ATEX CERTIFICATION

The ATEX directive consists of two EU directives describing what equipment and work environment is necessary to maintain safety in spaces with a potentially explosive atmosphere.

This ATEX directive was published on Saturday 29 March 2014, under the reference : Directive 2014/34/EU of the European Parliament and of the Council of 26 February 2014 on the harmonisation of the laws of the Member States relating to equipment and protective systems intended for use in potentially explosive atmospheres (recast) Text with EEA relevance - Official Journal of the European Union L 96 from 29/03/2014.

Areas classified into zones (0, 1, 2 for gas-vapour-mist and 20, 21, 22 for dust) must be protected from effective sources of ignition. [1] Equipment and protective systems intended to be used in zoned areas must meet the requirements of the directive. Zone 0 and 20 require Category 1 marked equipment, zone 1 and 21 require Category 2 marked equipment and zone 2 and 22 require Category 3 marked equipment. Zone 0 and 20 are the zones with the highest risk of an explosive atmosphere being present.

Equipment in use before July 2003 is allowed to be used indefinitely provided a risk assessment shows it is safe to do so.

The aim of directive 94/9/EC is to allow the free trade of 'ATEX' equipment and protective systems within the EU by removing the need for separate testing and documentation for each member state.

The regulations apply to all equipment intended for use in explosive atmospheres, whether electrical or mechanical, including protective systems. There are two categories of equipment 'I' for mining and 'II' for surface industries. The directive covers a large range of equipment, potentially including equipment used on fixed offshore platforms, in petrochemical plants, mines, flour mills and other areas where a potentially explosive atmosphere may be present.

Several of Brady's lockout devices and padlocks are ATEX certified. Contact your Brady representative to receive more details on those.

## KEY POSSIBILITIES

### Keyed Different (references in this brochure)

Brady padlocks are supplied “keyed differently” when purchased from stock. This means that the key for one lock should not open another. Brady padlocks use 5- or 6-pin cylinders to offer high levels of safety and security. Both cylinders and keys are precision machined to exacting standards. This enables us to offer a greater number of unique keys than other locks with the same number of pins, making it highly unlikely that you will ever receive a duplicate lock. To guarantee that each lock is different, we can chart your locks, ensuring that each Brady padlock you receive is different from the others (contact your Brady distributor for more information).

### Keyed Alike (on request)

When keyed alike, all locks in a set can be opened with the same key. This option is beneficial when multiple locks are assigned to a single employee.

### Master Keyed (on request)

A master key can be used to open multiple locks that are keyed differently. This allows supervisors to easily remove a lock in the event of an emergency. In order for employees to retain exclusive control, master keys should be kept in a secure location that is accessible only to management.

### Grand Master Keyed (on request)

The master key system can be extended to several teams. This way each team has a master key and all the locks of all the teams can be opened by a ‘Grand’ Master Key if necessary.

## LASER ENGRAVING - CUSTOMISE YOUR PADLOCKS

If the locks in your safety system are assigned to a single worker, you might want to imprint that person’s name onto the lock. This way, the locks will not get mixed up between workers and a clear distinction can be made.

You can also write the function of certain locks onto the body or number them if necessary.

We offer to do every kind of engraving on the locks for you so that you receive them just the way you want them to be. If you need more information, just ask us about the different possibilities.

### Information to provide:

- Area to be printed (front, back, right side, left side...)
- Engraving size:
  - Standard: 4 mm height for standard padlocks, 3 mm height for compact padlocks
  - XL: 6 mm height for standard padlocks, 4 mm height for compact padlocks
- Provide dxf, ai, plt, or eps-files for Logo-engraving

If you need more information, just ask us about the different possibilities.

### Why use different colours

- Valves in open or closed position:
- Indicate risk levels:
- Indicate substances flowing through a valve:
- Indicate different maintenance teams:

Red = open / Green = closed  
 Red = high risk / Blue = low risk  
 Yellow = gas / Green = water  
 Red = electricians / Blue = mechanics

Lockout device is unlocked by inserting and turning the black plastic key

1. Expose the super-bond adhesive on back of rail. Permanently affix to any location on the panel.

2. Attach the lockout device to the breaker and snap into locked position

3. Pass plastic key through lock rail and attach lock, preventing key from sliding down cable and opening lockout device

4. For group lockouts, run key through multiple loops in lock rail and apply locks. No hasps required! (Not recommended for use with multilock hasps)

5. Low-profile lockouts allow panel doors to be closed on most breaker panels.
